

PROJECT UPDATE / TIMBER INDUSTRY

Another Timber Treatment Autoclave in Production at Stavelse Metaalbouw

Stavelse Metaalbouw is the leading specialist in the design and manufacture of timber treatment installations, with expertise in both high- and low-pressure autoclave systems.

As a manufacturer of industrial autoclaves and custom-built machinery for the timber industry, the company develops solutions tailored to the specific production needs of each customer.

With comprehensive in-house capabilities — from engineering, design and programming to steel fabrication, manufacturing, assembly and installation — Stavelse Metaalbouw oversees the entire production process. Quality, reliability, efficiency and short cycle times are central to its approach.

NEW AUTOCLAVE FOR GERMANY IN PRODUCTION

The team at Stavelse Metaalbouw is currently working on another autoclave for the timber industry, destined for a customer in Germany.

Manufacturing and mechanical assembly have now progressed to the stage where electrical wiring of the machine has begun. This marks another important step towards completing the installation.

The project once again demonstrates the company's expertise in manufacturing industrial timber treatment installations and the close collaboration between its technical disciplines.

CUSTOM SOLUTIONS FOR THE TIMBER INDUSTRY

Stavelse Metaalbouw designs and manufactures custom-built timber treatment systems, industrial autoclaves and high- and low-pressure timber treatment equipment for customers in international markets.

Each installation is designed around the customer's specific applications, production capacity and technical requirements.

With a strong focus on quality, technical innovation and customer-oriented solutions, Stavelse Metaalbouw continues to deliver reliable and efficient installations for the global timber industry.

Further project updates will follow as the autoclave approaches completion and preparations begin for transport to Germany.
